Art Unit: 2154

DETAILED ACTION

1. Claims 1-5 are presented for examination.

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/5/2005 has been entered.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- 4. Claims 1-2 and 5 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Nowhere in the specification teaches or suggests to specially marking a message only if it is already being transmitted. Does this exclude any of the marking to all other messages?
- 5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

Application/Control Number: 09/857,153 Page 3

Art Unit: 2154

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. The following terms lack proper antecedence basis:

a. Claim 5, line 2 – a transmitter protocol.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

- 8. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Garrabrant et al (hereinafter Garrabrant), US 5,610,595.
- 9. Garrabrant was cited by the applicant in IDS dated 5/31/2001.
- 10. As per claim 1, Garrabrant taught the invention as claimed including a method of secure data transmission which is executed on a layer basis using a transmission method having possible message overhaul, comprising the steps of:
 - a. Specially marking a message only if it is already being transmitted for at least a second time by said transmitter (col.6, lines 58-64, col.9, lines 5-8; designating acceptable sequence numbers); and

Application/Control Number: 09/857,153 Page 4

Art Unit: 2154

b. Ignoring said message which is marked as having been transmitted for at least a second time by a receiver if it recognizes said message as having already been received or if it interprets said message as a new message (col.8, lines 62-67, col.9, lines 1-8, 20-31).

- 11. As per claim 2, Garrabrant taught the invention as claimed including a method of secure data transmission wherein a transmitter protocol operates on a layer basis using a transmitter protocol having possible message overhaul, comprising the steps of:
 - a. specially marking, by said transmitter protocol, a message only if it is already being transmitted for at least a second time (col.6, lines 58-64, , col.9, lines 5-8, 20-35).
- 12. As per claim 3, Garrabrant taught the invention as claimed including a method of secure data transmission wherein a receiver protocol operates on a layer basis using a receiver protocol having possible message overhaul, comprising the steps of:
 - a. Ignoring, by said receiver protocol, a message which is marked as having been transmitted at least for a second time if it recognizes the message as having already been received or if it interprets said message as a new message (col.8, lines 62-67, col.9, lines 1-8, 27-31).

Application/Control Number: 09/857,153

Art Unit: 2154

13. As per claim 4, Garrabrant taught the invention as claimed including a method of secure

data transmission wherein a receiver protocol operates on a layer basis using a receiver protocol

having possible message overhaul, comprising the steps of:

a. Ignoring, by said receiver protocol, a message if it recognizes said message as

having already been received or if, although it interprets said message as a new

Page 5

message, said message is situated outside of a prescribed window (col.8, lines 62-

67, col.9, lines 1-8, 21-31).

14. As per claim 5, Garrabrant taught the invention as claimed including a transmitter for

secure data transmission with a transmitter protocol operating on a layer basis using a transmitter

protocol having possible message overhaul, comprising: a means for specially marking a

message only if it is already being transmitted for at least a second time (col.6, lines 58-64, col.9,

lines 5-8, 20-35).

15.

Response to Arguments

- 16. Applicant's arguments filed 8/5/2005 have been fully considered but they are not persuasive.
- 17. In the remark, applicant argued that (1) Garrabrant marks each message transmitted with a sequence number field which is in contrast to the invention since the claimed invention marks a message only if it is the second time it is being transmitted. There is no teaching or suggestion in

Application/Control Number: 09/857,153

Art Unit: 2154

Garrabrant that the initial message is not marked upon the first transmission but is marked upon a second or subsequent transmission as disclosed and claimed in the present application.

Page 6

18. Examiner traverse the argument:

As to point (1), Although Garrabrant taught to use sequence number field in all the packets, Garrabrant taught to specially mark only the repeated message (col.8, lines 62-67, col.9, lines 1-8, 20-31; packets which are to be retransmitted are specially marked with a designated set of acceptable sequence numbers). Garrabrant's teaching clearly reads on the claimed language since Garrabrant teach to mark all the packets using sequence number and further specially mark packets which are to be retransmitted with a designated set of acceptable sequence numbers. Especially since the claim languages do not clearly define the term "specially marking". Applicant's argument that the first transmitted message is not marked is not necessary an inherently feature since the claim language defined that only the retransmitted packets are specially marked. Rather, it may have been inherent that the first transmitted message is not specially marked. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., the first transmitted message is not marked) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Conclusion

Page 7

19. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Rondeau, US 5,734,643.

- 20. A shortened statutory period for reply to this Office action is set to expire THREE MONTHS from the mailing date of this action.
- 21. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenny Lin whose telephone number is (571) 272-3968. The examiner can normally be reached on 8 AM to 5 PM Tue.-Fri. and every other Monday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Follansbee can be reached on (571) 272-3964. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
